# ARGENTINA/Instituto Nacional de Tecnología Agropecuaria

Jorge Antonio Hilbert

GMI Biogas Subcommittee Meeting 28 October 2019

#### PROMOTION OF RENEWABLE ENERGY

- ✓ LAW 26.093/2006: PROMOTES THE PRODUCTION AND USE OF BIOFUELS (Implemented by Decree 109/07).
  - ✓ Mandatory use 7% bioethanol and 9% biodiesel
  - ✓ Definition of domestic prices for biofuels
  - ✓ Quality standards
- ✓ LAW 26.190/2006 8 % Renewables in Electric energy generation

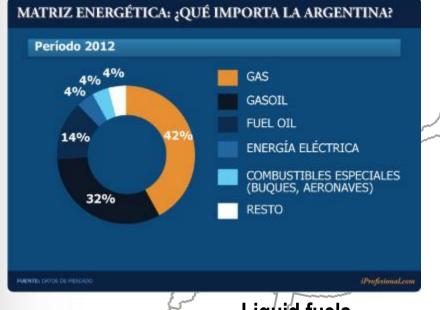

The law prioritizes projects that accomplish the following criteria:

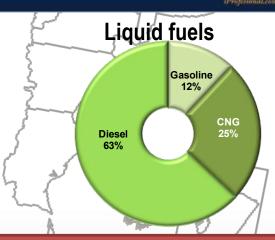

- ✓ Sponsored by small and medium sized companies.
- ✓ Belong to farming producers.
- ✓ Located in regional and rural economies.

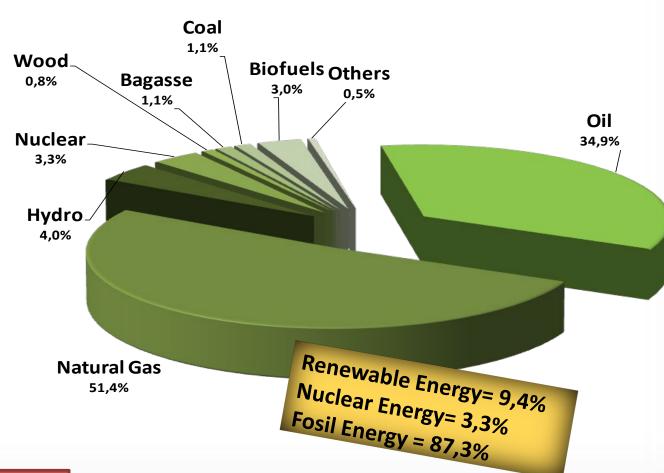

<sup>\*</sup> Law 26.093 extends benefits to sugar plants, sugarcane and ethanol producers

#### ARGENTINE ENERGY CONSUMPTION BY SOURCE

Argentina imported 14.000 million dolars during 2013 this changed with shale gas

Department of Energy

#### **Present situation**

- The RENOVAR program with the different calls produced a new market and incentives for new projects.
- The PROBIOMASA program of the Ministry of Agriculture has a specific biogas program organizing meetings c& courses all over the country and online. The program has an updated biogas project data base in a GIS format.
- Residue potential is huge and with relative low feedstock costs.
- New companies in the market are growing most in a mix way with europeans
- Opportunities also arise in the great CNG market with more tan 2 millio vehicule runing on this fuel

#### Inmediate future

- Argentina commitments on climate change were increased during Macri administration there is uncertainty on the new Fernandez administration policy.
- Present policy on renewable incentives is linked to hard currency prices which may be revised by the new administration.
- Biofuels is coming to an end and there are different criteria on the new law that eventually will replace it. All this is dependent on the change of administration transition agreements.
- Economic turmoil inflation, foreign and internal debt conspires against long term buniness & investments

#### City problems

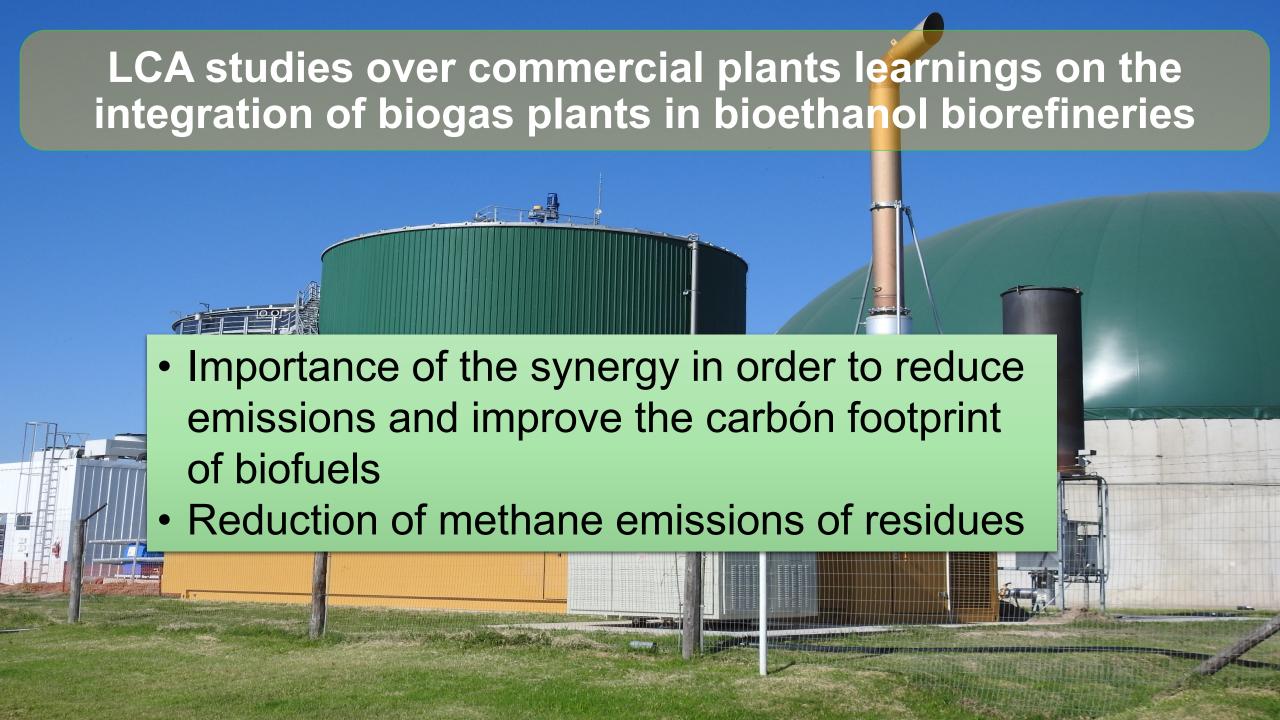

- Sustained and accelerated growth
- Problems of solid and liquid waste
  - ➤ How to treat them (technological alternatives)
  - ➤ Where to do it (logistics and transport) (citizen resistance)
  - > Where to deposit them (more confined spaces and neighbors resistence)
  - >At what costs (high demand for investment and maintenance)
- Increasing pollution of air, soil and water (groundwater rivers and lagoons).
- Growing health problems and quality of life
- Deficit and rising energy costs
- > High levels of emissions to the atmosphere impact on climate change

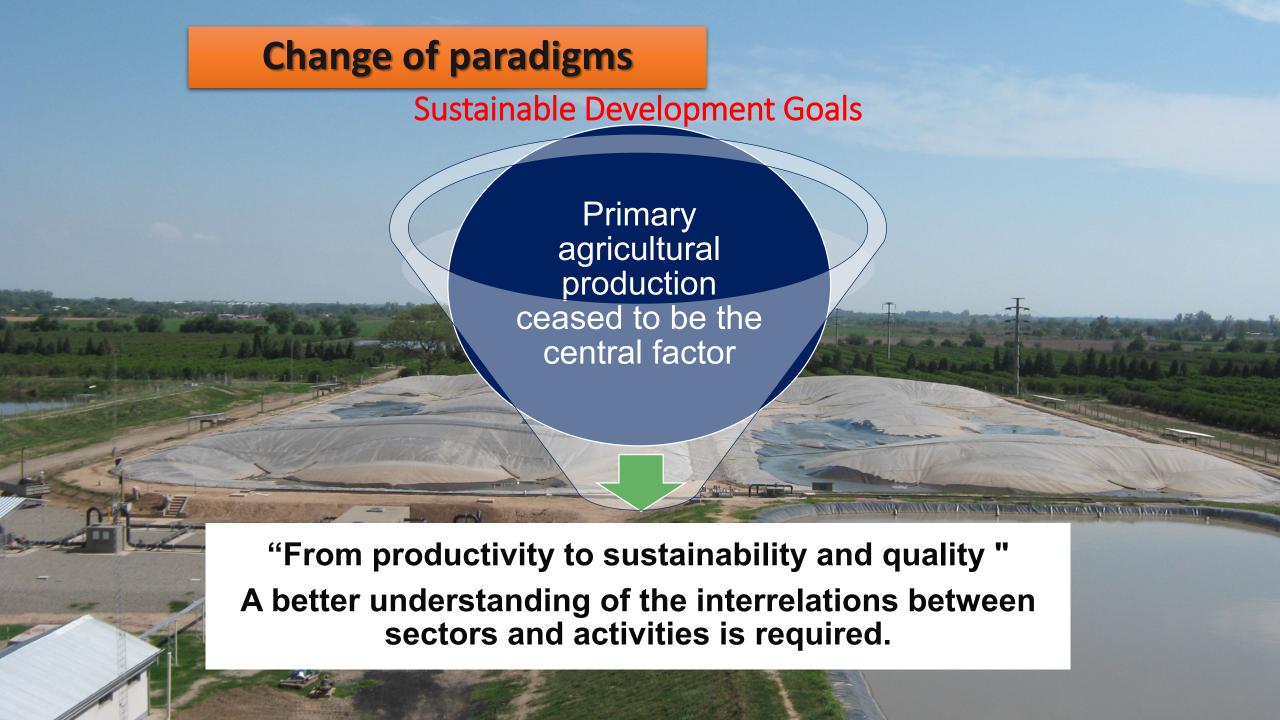

### Farming problems

- Energy deficit and growing import
- Nutritional deficit of soils
- > Increase in water cycles
- Weed resistance
- Adjusted margins
- > Reduction of organic matter and physical deterioration of soils
- Cost of fertilizers
- > Pollution by effluents of groundwater rivers and lagoons.
- > High levels of emissions to the atmosphere of organic waste

### Number of new biogas projects Electric power and price payed

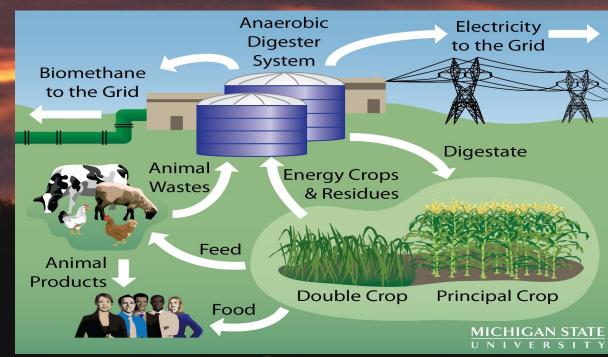

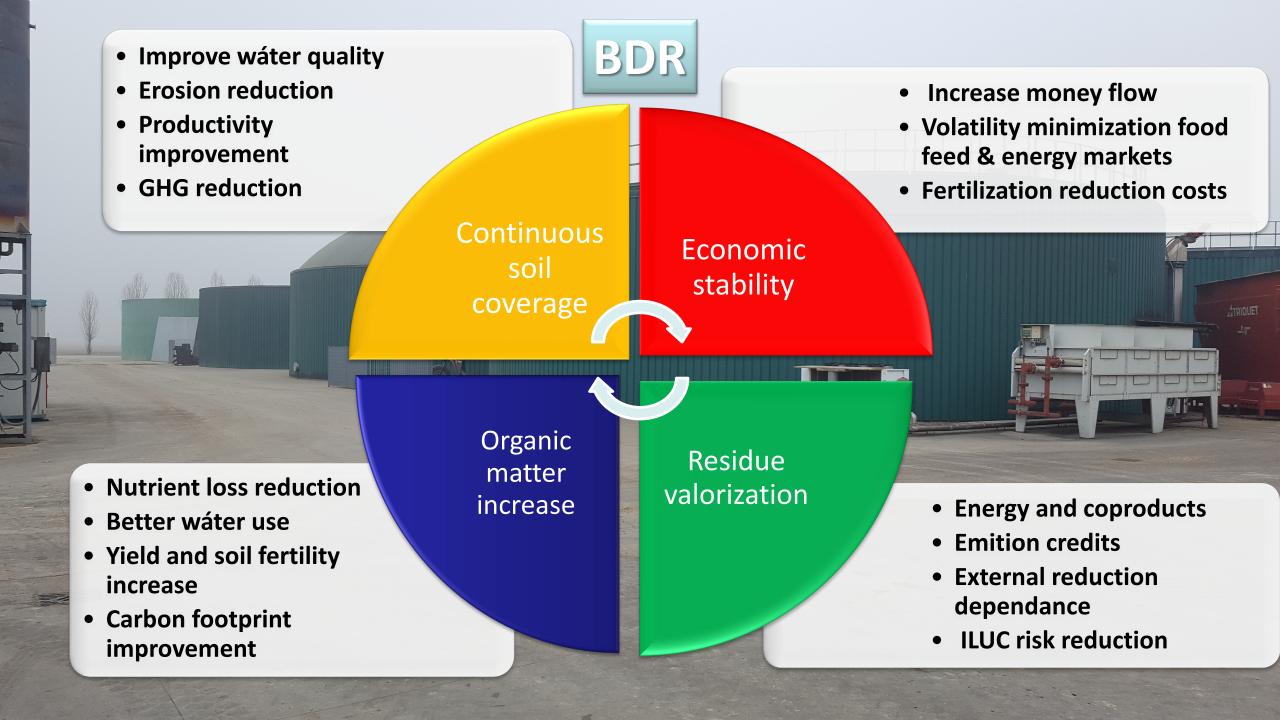

## BIOGAS DONE RIGH BDR

# A NEW PROPOSAL TOWARDS A SUSTAINABLE DEVELOPMENT OF BIOGAS

# Thank you!
