

# STATUS & TRENDS IN CMM PROJECT DEVELOPMENT

## OBJECTIVE

The objective of the session should be for the audience/participants to obtain a perception of;

- What has been done in CMM/VAM abatement so far in different regions of the World.
- In what stage of abatement/utilization are different coal mining regions.
- Examples of promising new development.

### *NOTE:*

*Focus on regional & project/stake holder aspects rather than on technology.*

# STATUS & TRENDS IN CMM PROJECT DEVELOPMENT

Panel members should be suitable reps that can provide experience and overview on similarities, differences and status of these mine gas markets.

Panel experts should be able to briefly outline development and experience from CMM/VAM processing representing coal mining industry in (combinations of);

- Western Europe (UK, Germany)
- Former Eastern Europe (Russia, Ukraine, Kazakhstan, Poland etc)
- Northern America (US)
- China
- Australia
- India
- Others - Mexico, South Africa

Panel members could be representing both coal mines and consultants, CDM companies, and equipment vendors.

Progressive examples should be presented of projects/concepts that have or can have a major impact on emission reductions. These could be projects that are under implementation or that are already operational.
